Process introduction

Polishing

Polishing is aimed at obtaining a smooth surface or a specular gloss. When polishing, the high-speed rotating polishing wheel (circumferential speed of 20 m/sec or more) is pressed on the workpiece to cause the abrasive rolling and micro-cutting on the surface of the workpiece, thereby obtaining the bright machined surface.

Spray paint

A method of applying a uniform and fine mist droplet to a surface of an object to be coated by means of air pressure by means of a spray gun, low cost and environmentally friendly paint.

Powder coating

The coating powder does not need thin materials, construction environmental protection, non-toxic to human body, Excellent coating appearance, strong adhesion, high mechanical strength, spraying curing time is short, Coating corrosion-resistant, wear-resistant, environmental protection, Non-toxic.

Electroplate

The electroplating process is a method of laying a layer of metal on the conductor by the principle of electrolysis. Which can enhance the corrosion resistance of the metal (the corrosion-resistant metal is mainly used for the electroplating metal), increase the hardness, prevent the abrasion, improve the conductivity, the smoothness and the resistance, Heat and beautiful appearance.

Silk screen printing

Screen printing is not limited by the size and shape of the substrate, The ink layer has strong covering power and is suitable for various types of ink. It is convenient to plate, cheap price and low cost. Generally only 1-3 colors can be printed.

Emboss

Emboss must have corresponding molds, the high cost, pattern and product are integrated, will not fall off, can improve product grade, The color of the logo is the same as the color of the cup.

Process introduction

Heat transfer printing

The transfer process transfers the fine pattern on the transfer film to the surface of the product through one treatment (heating and pressurization) by the heat transfer machine. After forming, the ink layer is combined with the surface of the product, Which is realistic and beautiful, greatly improves the grade of the product, low production cost, strong hiding powder, strong adhesion, confirms to the green printing standard, and no pollution.

Laser Logo

Laser engraving process is based on CNC technology, safe and reliable, non-contact processing, precise and meticulous, processing accuracy can reach 0.02mm, saving environmental protection, small bean and spot diameter, consistent with the batch effect, high speed low cost, not limited by the number of processing.

3D printing

The pattern is printed on the product through a 3D printer, the color is bright, the pattern has a concave and convex shape, and the complicated graphic can be operated.

Gas dye printing

Gas dye printing is a consumable for printing on a special layer of paper (flower bud) for gas dyeing with special gas-dyeing ink. Any complicated pattern can be transferred, there will be 360-degree seam, high cost, clear pattern.

Water transfer printing

Water transfer is a kind of printing that uses water as a dissolving medium to transfer colored pattern transfer paper/film onto the products and transfer any natural lines, photographs and images onto the product. The limitation that transfer image is easily deformed, which is related to the shape of the product, and also related to the nature of the water transfer film itself. The higher the price, the more complicated the process.

Etc.....
